

# TRAILING SHOES

9m

# Inject, Add value, Preserve.

**Precise fertiliser incorporation**  
**No spillover on grass and crops**  
**Perfect following of ground contours**

## TRAILING SHOES - 9m

Ideal for precision spreading on grassland

### The key advantages of our trailing shoes

- ✓ Slurry injection in a thin strip
- ✓ Application as close as possible to the root
- ✓ Reduced nitrogen loss
- ✓ Maximum value out of organic fertiliser
- ✓ Minimum smell
- ✓ Better aeration of grassland
- ✓ Keep plants and grass clean
- ✓ Healthy and living soil
- ✓ Quicker return of cattle on fields

### The boom functions

In-cab simplified controls for:

- Boom arms opening/closing
- Hoses vertical folding/unfolding (*no leaks during transport*)
- Hydraulic locking

### The strengths of our design

- Blade made from cast steel
- High-tensile steel springs
- 45° angle to the ground
- Very high distribution into the earth
- Very good penetration into soil
- Very good following of ground contours
- Easy to cross obstacles

### Vertical Macerator(s)

- Ideal for spreading thick slurry
- Foreign bodies caught in the stone trap
- Optimised distribution of slurry
- Even outlet distribution

### "Passive" slope compensation

- Boom always parallel to the ground
- Perfect distribution across the entire working width
- Reduced stress on the boom structure
- Very good following of ground contours

### Drip prevention

- Hydraulic vertical folding of shoes
- Prevent leaks of liquid during transport
- Machine and road kept clean at all time

### Hydraulic locking

- Synchronised with the boom arms and shoes folding
- Safety during transport

### Features

Working width (m)	Number of outlets	Space between hoses (cm)	Number of macerator(s)
9	30 Ø40	33	1
