

FLAT DISC INJECTOR

EL71 MODEL

Inject, Add value, Preserve.

- Protection of soil structure
- Precise injection to plant's root
- Reduced crop damage and contamination

FLAT DISC INJECTOR - EL71

Highly versatile, ideal for precise injection on grassland

The advantages of the EL71 model

- ✓ Maximum value out of organic fertiliser
- ✓ No nitrogen loss through volatilisation and run-off
- ✓ No odours to the local environment and surrounding areas
- ✓ Increase of spreading surfaces
- ✓ Soil structure respected
- ✓ Protection of plant cover
- ✓ No liquid spillage on plants
- ✓ Soil appetite preserved
- ✓ Quicker return of cattle on fields

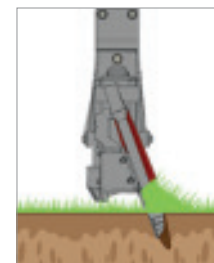

Types of ground covered

Injection after harvest or on bare soil

- > Grassland
- > Growing crops
- > Stubble after harvest

Vertical Macerator (optional)

- > Ideal for spreading thick slurry
- > Foreign bodies caught in the stone trap
- > Optimised distribution of slurry
- > Even outlet distribution

Opening flat discs

- Disc diameter: 640 mm
- Soil cut into slits
- Working depth: 5 to 10 cm
- Soil structure preserved
- Reduced space between the discs

Injection device

- Liquid injection behind the disc
- Application as close as possible to the root
- Self-cleaning discs with steel scrapper

Pair of wheels for depth control

- Controls the depth perfectly
- Stabilises traction power
- Simplified adjustment
- High load resistance

Features

Working width (m)	3	4	5	6
Number of discs	8	10	12	14
Space between discs (cm)	40			
Traction power (hp/m)	25
